SUMMARY

- Software Engineer with a Bachelor of Technology in Computer Science & Engineering (CGPA: 8.8/10) and 2+ years of experience designing, developing, debugging, and maintaining full-stack web applications using JavaScript, TypeScript, React.js, React Native, Next.js, Python, Node.js, REST APIs, SQL, and modern web technologies.
- Hands-on experience across the complete Software Development Life Cycle (SDLC), including product research, UI/UX implementation, frontend and backend development, authentication, API integration, debugging, deployment support, performance optimization, and Agile software delivery.
- Built responsive web and mobile applications from concept to deployment, collaborated with cross-functional engineering teams, resolved production issues, implemented reusable component architectures, and contributed to scalable software solutions for startup environments.
- Collaborate directly with Engineering Managers, Technical Program Managers, and Hiring Leaders to understand technical requirements, software architecture expectations, technology stacks, engineering workflows, and interview processes for highly specialized software engineering positions.
- Currently enrolled in the Crio Backend Development Fellowship, strengthening expertise in Java, Spring Boot, Microservices, Distributed Systems, PostgreSQL, Docker, AWS, System Design, Backend Engineering, and Scalable Software Architecture, while actively preparing for Software Development Engineer (SDE) roles at product-based organizations.
- Passionate about solving complex engineering problems, writing clean and maintainable code, continuously learning new technologies, and building scalable software products that deliver meaningful business impact.

SKILLS

- Software Engineering
- Backend Development
- Frontend Development
- Full Stack Development
- REST API Design
- Distributed Systems
- Object-Oriented Programming
- Data Structures
- Algorithms
- Database Design
- System Design Fundamentals
- Responsive Web Applications
- API Integration
- Authentication
- Performance Optimization
- Scalable Applications
- Cloud Fundamentals
- Debugging
- Problem Solving
- Agile Development
- SDLC
- Clean Code
- Design Patterns

TECHNICAL SKILLS

- Java
- Python
- JavaScript (ES6+)
- TypeScript
- SQL
- React.js
- Next.js
- HTML5
- CSS3
- Tailwind CSS
- Redux
- Context API
- Responsive Design
- Component-Based Architecture
- Node.js
- Express.js
- Flask
- REST APIs
- JWT Authentication
- CRUD Operations
- JSON
- HTTP/HTTPS
- API Integration
- MySQL
- PostgreSQL
- SQLite
- MongoDB
- Computer Science Fundamentals
- Data Structures
- Algorithms
- Object-Oriented Programming
- Operating Systems
- DBMS
- Computer Networks
- Time & Space Complexity
- Concurrency
- Git
- GitHub
- Docker
- Linux

- Postman
- VS Code
- Vercel
- CI/CD Fundamentals
- Engineering Practices
- Agile
- Scrum
- Version Control
- Code Reviews
- Debugging
- Refactoring
- Performance Optimization
- Clean Architecture

EXPERIENCE

LanceSoft Inc.

Apr 2025 – Present

Associate US Technical Recruiter

- Partner with Engineering Managers, Technical Program Managers, Solution Architects, and Hiring Managers to understand project objectives, engineering roadmaps, team structures, software architecture expectations, and technical hiring strategies.
- Support engineering hiring initiatives for Fortune 500 and product-based organizations including Zoox (Amazon) and other enterprise clients across the United States.
- Participate in client intake meetings and technical requirement discussions to understand engineering challenges, technology stacks, software development methodologies, interview processes, and role expectations before initiating hiring strategies.
- Research software engineering domains including Backend Engineering, Embedded Systems, Distributed Systems, Cloud Computing, Infrastructure, AI/ML, Firmware, Enterprise Applications, and Platform Engineering to align sourcing strategies with evolving technical requirements.
- Review and assess hundreds of engineering resumes and technical portfolios, identifying software architecture experience, coding proficiency, debugging skills, scalability considerations, project ownership, and measurable engineering impact.
- Build advanced Boolean search strategies, talent pipelines, and market intelligence for highly specialized engineering positions while consistently supporting multiple concurrent hiring initiatives.
- Continuously study engineering interview methodologies, coding assessments, software engineering best practices, distributed architectures, and technical hiring standards adopted by leading product-based organizations to strengthen technical evaluation capabilities.

Tech Venia

Aug 2024 – Mar 2025

Software Development Engineer

- Collaborated with a cross-functional engineering team of 5–7 developers to maintain, enhance, and improve the SciVenia research platform through bug fixing, debugging, feature enhancements, and production support.
- Investigated software defects across frontend, backend, and deployment environments using structured debugging techniques, log analysis, and root cause investigation to improve overall platform stability.
- Worked closely with senior engineers to resolve production issues, validate fixes, and improve application reliability through continuous testing and code reviews.
- Assisted in deployment activities, release validation, environment verification, and post-deployment issue resolution to ensure successful software releases.
- Contributed to frontend feature development, backend API integration, Java-based modules, and deployment-related tasks while gaining practical exposure to enterprise software development.
- Participated in Agile software development practices including sprint planning, backlog refinement, daily stand-ups, code reviews, testing, debugging, and release management.
- Strengthened expertise in Java, software debugging, deployment workflows, REST APIs, Git, software architecture concepts, and collaborative software development.

Time Space Lab Inc.

Jul 2023 – Mar 2024

Software Developer

- Contributed to the complete software product lifecycle for a fitness technology startup, participating in product research, requirement analysis, UI/UX design, application development, testing, and deployment.
- Conducted market and competitor research to understand user requirements and translate business objectives into scalable software solutions and intuitive digital experiences.
- Designed and developed responsive web applications using React.js, reusable component architecture, and modern frontend engineering practices.
- Developed cross-platform mobile interfaces using React Native, delivering consistent user experiences across Android and iOS devices.
- Designed production-ready UI/UX workflows from business requirements and transformed design concepts into responsive, accessible user interfaces.

- Implemented secure authentication and authorization workflows including user registration, login, session management, protected routes, and API-based authentication.
- Integrated frontend applications with backend REST APIs, ensuring reliable asynchronous communication, efficient state management, and seamless user interactions.
- Collaborated closely with backend developers to define API contracts, validate business logic, troubleshoot integration issues, and improve application reliability.
- Participated in Agile software development, Git-based version control, peer collaboration, debugging, issue tracking, testing, and continuous product improvements throughout the development lifecycle.

Albireo Tech System

Jul 2022 – Jul 2023

Junior Software Developer

- Supported frontend and backend software development activities across multiple client web application projects.
- Developed responsive user interfaces using React.js, Next.js, HTML5, CSS3, JavaScript, and TypeScript, following reusable component architecture and responsive design principles.
- Assisted in backend development, REST API integration, authentication workflows, data validation, and frontend-backend communication.
- Collaborated with senior developers to implement new features, troubleshoot production issues, optimize application performance, and improve overall software quality.
- Worked with Java, React.js, Next.js, Git, SQL, REST APIs, and modern software development tools, strengthening full-stack software engineering fundamentals.
- Participated in debugging, feature implementation, testing, code reviews, Git workflow, and software maintenance activities while contributing to maintainable and scalable codebases.
- Worked within Agile Scrum teams, collaborating with developers, designers, and stakeholders to deliver client-focused software solutions.

PROJECT

Apple Website

- Live Demo: [Apple](#)
- Next.js | React.js | Three.js | GSAP | Tailwind CSS
- Designed and developed a production-quality Apple-inspired website replicating Apple's modern user experience through responsive layouts, smooth animations, and reusable component architecture.
- Implemented Server-Side Rendering (SSR) and Static Site Generation (SSG) using Next.js to improve performance, SEO, and initial page rendering.
- Integrated Three.js and GSAP to build interactive 3D product experiences and high-performance animations.
- Optimized application performance using lazy loading, image optimization, reusable components, and modern rendering techniques to improve Core Web Vitals.
- Deployed the application on Vercel while following modern frontend engineering and deployment practices.

Video Room Application

- Live Demo: [Video Room](#)
- React.js | Node.js | WebRTC | Socket.IO
- Developed a real-time communication platform supporting browser-based video conferencing and instant communication.
- Built responsive user interfaces with reusable React components and asynchronous event-driven architecture.
- Integrated REST APIs, WebRTC, and Socket.IO to support real-time communication and efficient client-server interaction.
- Designed scalable frontend architecture with modular components, state management, and API integration.
- Focused on application responsiveness, maintainability, and user experience through iterative development and testing.

Portfolio

- Live Demo: [Portfolio](#)
- Next.js | TypeScript | Tailwind CSS
- Designed and developed a modern developer portfolio showcasing software engineering projects, technical expertise, certifications, and professional experience.
- Implemented reusable UI components, responsive layouts, dark mode support, SEO optimization, and performance-focused frontend architecture.
- Deployed using Vercel with continuous updates and version-controlled development through GitHub.

EDUCATION

- Bachelor of Technology in Computer Science & Engineering Mahakal Institute of Technology (RGPV) 2019 – 2023
CGPA: 8.8 / 10
- Higher Secondary Education Spring Valley Public School Indore 2019

Relevant Coursework

- Data Structures & Algorithms
- Database Management Systems
- Operating Systems
- Computer Networks
- Object-Oriented Programming
- Software Engineering

PROFESSIONAL DEVELOPMENT

Crio Backend Development Fellowship (Currently Enrolled)
